

## Improvement!!!!

I am the grandmother and care giver of a wonderful 15 year old boy that is labeled autistic. We finished our second AIT Berard method the first being when he was six. He has gained so much from this time. He can focus and attend to questions better. His expressive language is coming around and he has come to me to ask for things instead of standing in the other room mumbling. We can now understand what he says. He is still very literal in his thinking but his abilities are getting better all the time. He can tolerate loud sounds and understands when called from the back room now.
